**Fine Ceramics**

TOSHIBA MATERIALS CO.,LTD.

**We wish to be one of the sustainers  
of the affluent future.  
Our minute materials can help  
a big dream come true.**

**We are pioneers aiming to be the industry leaders.  
We answer the needs of the age with quality "Only-one" products.**

We have already started to develop nitride ceramics of both silicon nitrides ( $\text{Si}_3\text{N}_4$ ) and aluminum nitrides (AlN) since nineteen sixties and have supplied a variety of nitride products to such high-tech industries as bearings, automotives, semiconductors to support their footings. On the other hand, we have found the first way in the world to strengthen fine ceramics, namely adding rare-earth oxides or yttria ( $\text{Y}_2\text{O}_3$ ) as the sinter aid to silicon nitrides ( $\text{Si}_3\text{N}_4$ ) and aluminum nitrides (AlN). Our highly reliable and high quality products are agreeably evaluated and widely applied to the key components of bearings for aero-spatial craft engines and substrates for power modules including IGBTs.

# Fine Ceramics for Electronics

Aluminum nitride (AlN),  
Silicon nitride (Si<sub>3</sub>N<sub>4</sub>) ceramics

Fine ceramic substrates with high thermal conductivity are becoming indispensable components under the circumstances needs for high power, high integration, slim and lightweight, high frequency and environmental friendliness prevail. We take advantage of one of our core technologies, the grain boundary control of ceramic microstructure, to produce the aluminum nitride (AlN) and the silicon nitride (Si<sub>3</sub>N<sub>4</sub>) substrates with the world highest thermal conductivity on a commercial basis.

## Typical values for properties of fine ceramics for electronics

Item	Unit	Aluminum nitride (AlN)				Silicon nitride (Si <sub>3</sub> N <sub>4</sub> )		
		TAN-170	TAN-200	TAN-230	TAN-250	TSN-90		
Density	Mg/m <sup>3</sup>	3.3				3.2		
Water absorption	%	0.00				0.00		
Color		White				Gray		
Thermal properties	Specific heat		740				680	
	Thermal conductivity		160-180	190-210	220-235	240-255	85-95	
	Coefficient of thermal expansion	RT-500°C	x10 <sup>-6</sup> /K				2.6	
	Critical diff. temperature	(ΔTc)	°C				600	800
Electrical properties	Dielectric strength	50Hz	kV/mm				15	15
	Volume resistivity	25°C	Ω·m				>10 <sup>12</sup>	>10 <sup>12</sup>
	Dielectric constant	1MHz					8.8	8.1
	Dielectric factor	1MHz	tanδx10 <sup>-4</sup>				5.0	3.0
Mechanical properties	Hardness	HV(0.5kgf)	1,000				1,500	
	Bending strength		MPa				>300	600-700
	Fracture toughness	at RT	MPa·m <sup>1/2</sup>				2.5-3.5	6-7
	Young's modulus	at RT	GPa				330	317
	Poisson's ratio						0.24	0.27
Chemical resistance	Acid	Excellent				Excellent		
	Alkali	Good				Excellent		
Features		High thermal conductivity Low loss at high frequency				High thermal conductivity High strength		
Main applications		Substrates for semiconductor assembly Radiator plates Heat sinks				Substrates for semiconductor assembly Radiator plates (for compression force) Heat sinks		

## Plain substrates (AlN, Si<sub>3</sub>N<sub>4</sub>)

We offer plain substrates, which have a dense, minute microstructure made by our material and sintering technology that took a long time to develop. To meet diversified needs of customers, we line up four kinds of aluminum nitride (AlN) plain substrates that differ in thermal conductivity and a high thermal conductive silicon nitride (Si<sub>3</sub>N<sub>4</sub>) plain substrate with excellent mechanical properties. Our plain substrates have a low thermal expansion coefficient similar to those of silicon semiconductor chips, which means that they are best fit for semiconductor mounting substrates. They are widely applied to various substrates including submount substrates and thick/thin microwave circuit substrates.

### Standard design

Item	Unit	Aluminum nitride (AlN)			Silicon nitride (Si <sub>3</sub> N <sub>4</sub> )
		TAN-170	TAN-200	TAN-230	TSN-90
Outer dimensions	mm	MAX 160×160 φ 210	MAX 160×160	MAX 100×100	MAX 170×130
	Tolerance	Standard ±1% ±0.2mm (Laser cut)			±0.15 (Laser cut)
Thickness	mm	0.4~2.5	0.4~1.5	0.635	0.32 0.635
	Tolerance	Standard ±10% ±0.02mm (Abrasive processing)			±0.05mm
Warp	mm/mm	0.4% Under			0.4% Under (≤50mm)
Surface area	—	Standard / Blast processing (Honing) / Lapped / Polished / No surface finish (As-Fired)			Blast processing (Honing)

### Temperature dependency of thermal conductivity and coefficient of thermal expansion

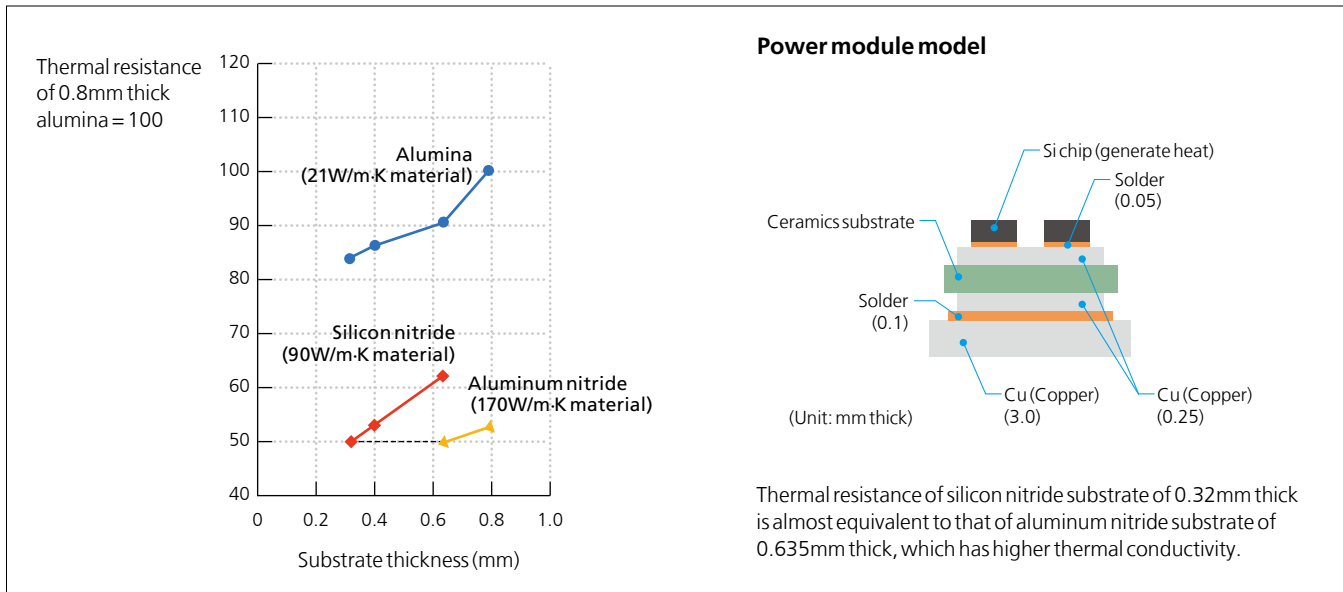

## Silicon nitride (Si<sub>3</sub>N<sub>4</sub>) plain substrates

In order to meet further needs for highly reliable semiconductor mounting substrates, we were quick to recognize excellent mechanical performances of silicon nitrides. As a result, we have taken the lead in the world in commercializing high thermal conductive silicon nitride insulated substrates for power semiconductors with more than four times thermal conductivity, which had been as low as alumina, while maintaining high strength.

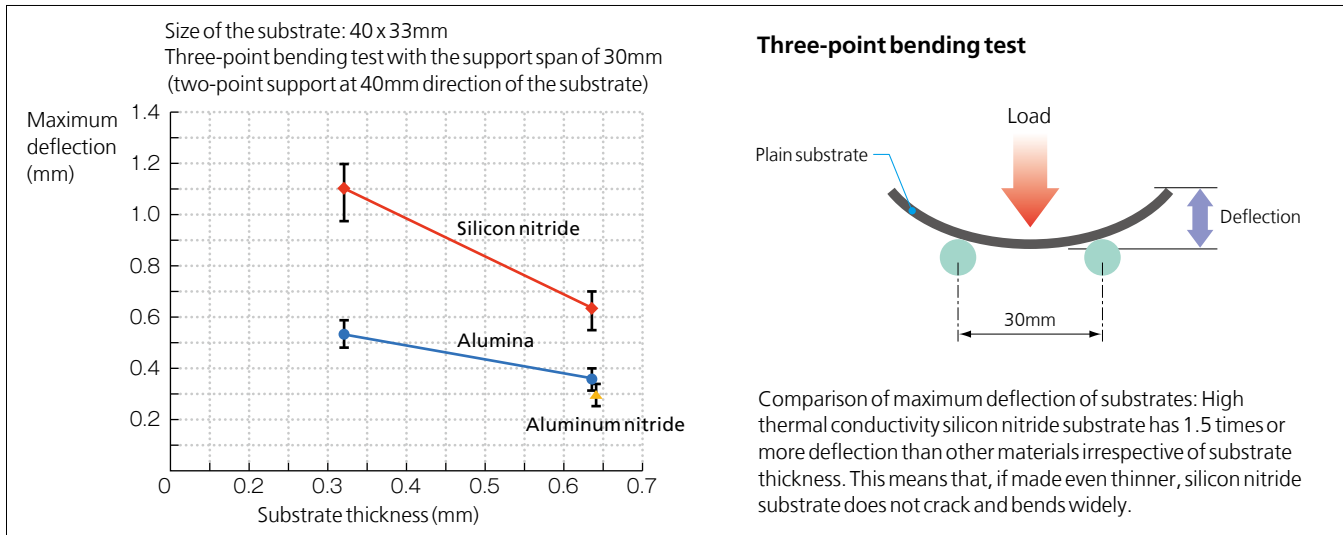

Our high thermal conductive silicon nitride substrates are increasingly being used for PCUs (Power Control Units) of EVs (Electric Vehicles) and HEVs (Hybrid Electric Vehicles).

### Comparison of thermal resistance (example)

### Comparison of deflection characteristics of plain substrates

## Active metal brazed layer copper (AMC) substrates

We offer all purpose copper plated ceramic substrates by active metal brazing method to meet diversified requirements that have arisen in power module substrates.

Active metal brazed copper (AMC) substrates are made by joining copper circuit plate onto ceramic substrates by brazing. They are suitable for making fine patterned power module circuits with high thermal cycle performance. We offer silicon nitride AMC (SIN-AMC) substrates and aluminum nitride AMC (ALN-AMC) substrates for the basement ceramic substrates.

AMC substrates are best fit for high power semiconductor module substrates such as power transistor substrates like IGBTs. They directly dissipate heat with sufficient insulation.

### [Characteristics of SIN-AMC substrates]

- Simple structure with low thermal resistance. Specifically, thermal resistance of SIN-AMC substrate with the thickness of 0.32mm is almost equivalent to that of ALN-AMC substrate with the thickness of 0.635mm.
- Excellent mechanical strength properties; They have high thermal cycle performance even if the copper circuit is made thick (up to 0.8mm) to lower thermal resistance and increase power output.
- Their high fracture toughness allows direct ultrasonic bonding of electrode terminals onto the copper circuit plate and securing the substrate onto heat sink by rivets.
- Coefficient of thermal expansion equivalent to that of ceramics substrates enables direct mounting of Si chips onto the copper circuit plate.
- High joint strength of copper circuit plate
- High voltage resistance

### [Applications]

- Power transistor module (IGBT, MOSFET, etc.)
- Peltier thermoelectric module

### Standard design

Type of ceramics		Silicon Nitride (Si <sub>3</sub> N <sub>4</sub> )		
A, B	Ceramic dimension	Maximum effective area 90 X 110		
	Tolerance	±0.15		
C	Ceramic thickness	0.25/0.32/0.635		
	Tolerance	±0.05		
Electrode material		Cu		
D	Cu thickness	0.1–0.4	0.5–0.6	0.7–0.8
E	Pull back	≥0.5	≥0.7	≥1.0
F	Pattern dimension	≥0.5	≥0.7	≥1.0
G	Pattern gap dimension	≥0.4	≥1.0	≥1.2
H	Taper dimension	≥0.5D (Less than 1/2 of the Cu)		

Values on the chart are standard design rule and not guaranteed value. Please contact us for possibility of corresponding to designs not covered in above chart.

## AlN submount substrate

AlN submount is highly functional part that has superior characteristic of high thermal conductivity and high strength that is realized by Aluminum Nitride.

As product lineup, we offer AlN substrates with Ti / Pt / Au / AuSn / Cu thin film on the surface formed by lift off process.

Especially for Cu plated substrates, it excels in heat dissipation and it is also thick Cu plating that makes possible to achieve higher output.

AlN submount is used in low to high output laser diodes for DVC / CD light pickup, optical communication, processing machines and cinema applications.

It is also optimum solution for heat dissipation substrates of deep ultraviolet and high output LED that requires high heat dissipation characteristic.

### Standard specifications

Item		Unit	Ceramics			
			TAN-170	TAN-200	TAN-230	TAN-250
AlN materials	Thermal conductivity	W/m·K	160-180	190-210	220-235	240-255
	Thickness	mm	0.20-0.35			
	Thickness tolerances	mm	±0.02			
Conductive films	Film structure	—	Ti/Pt/Au			
	Film thickness	μm	0.5-3.5 (With patterns)			
	Thickness tolerances	%	±20			
Solder film	Film structure	—	Au-Sn (Au: 64-78wt%)			
	Film thickness	μm	0.5-3.5 (With patterns), 0.5-5.0 (Without patterns)

Dicing	Dicing tolerances	μm	±30			
	Packing		Mounted on tape			

# Engineering ceramics

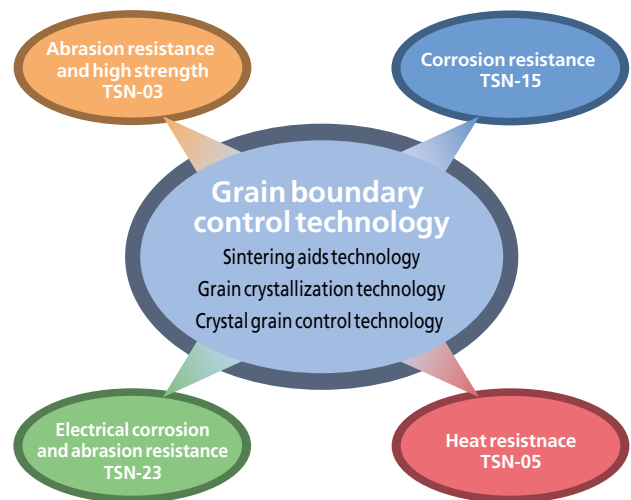

## Silicon nitride (Si<sub>3</sub>N<sub>4</sub>) ceramics

Among many ceramic materials, namely zirconia, silicon carbide and alumina, which are known to be used as engineering fine ceramics, we persistently produce silicon nitride ceramics as the only material for engineering ceramics.

We have well understood excellent properties such as high thermal conductivity and high strength of nitride ceramics from early-stages of the research. Then we have developed a grain boundary control technology and applied it to make Silicon nitride ceramics into stable, high-performance, high-functional materials and components.

Silicon nitride ceramics will show their well-balanced mechanical properties under high-speed rotation, high-speed sliding and high vacuum as they have good abrasion resistance, good corrosion resistance, high rigidity. We are looking forward to meet customer's diversified requirements with our silicon nitride ceramics.

### High performances of silicon nitride ceramics

## Typical values for properties of engineering ceramics

Item			Unit	Silicon nitrides(Si <sub>3</sub> N <sub>4</sub> )			
				TSN-03	TSN-08	TSN-15	TSN-23
Density			Mg/m <sup>3</sup>	3.23	3.27	3.17	3.27
Mechanical and thermal properties	Hardness	Hv (500g)		1,500	1,600	1,500	1,500
	Bending strength by JIS1601 three points bending strength	RT	MPa	1,000	1,000	900	900
		1000°C	MPa	750	900	750	700
		1200°C	MPa	450	850	450	400
	Compression strength	RT	MPa	5,000	4,500	3,500	4,000
	Young's modulus	RT	GPa	308			313
	Poisson's ratio			0.29			0.28
	Fracture toughness	K <sub>1c</sub>	MPa <sup>1/2</sup>	6-8	6-8	6-7	5-7
	Specific heat		J/kg·K	680	680	670	680
	Thermal conductivity		W/m·K	20	20	28	25
Coefficient of thermal expansion	RT-800°C	×10 <sup>-6</sup> /K	3.0				
Thermal shock temperature difference	(ΔT <sub>c</sub> )	°C	800	900	600	700	
Electrical properties	Dielectric strength	50Hz	kV/mm	>14			
	Volume resistivity	25°C	Ω·m	>10 <sup>12</sup>			
Corrosion* resistance	Acid		Good	Good	Excellent	Excellent	
	Alkali		Good	Good	Good	Good	
Features			High strength Abrasion resistant Corrosion resistant	Heat resistant Abrasion resistant Corrosion resistant	Corrosion resistant High strength Abrasion resistant	Abrasion resistant Corrosion resistant (Electrical corrosion)	
Recommendatory applications			Bearings Engine parts Mechanical parts Heat-resistant and abrasion-resistant parts	Mechanical parts Refractory tools	Bearings Chemical parts Abrasion resistant parts	Bearings Engine parts	

\*Corrosion resistances were measured under following conditions.

Acid; 96 hours immersion at RT in 36% HCl, 95% H<sub>2</sub>SO<sub>4</sub> and 60% HNO<sub>3</sub> Alkali; In 5% NaOH and 40% NaOH

## Silicon nitride ( $\text{Si}_3\text{N}_4$ ) Bearing Balls

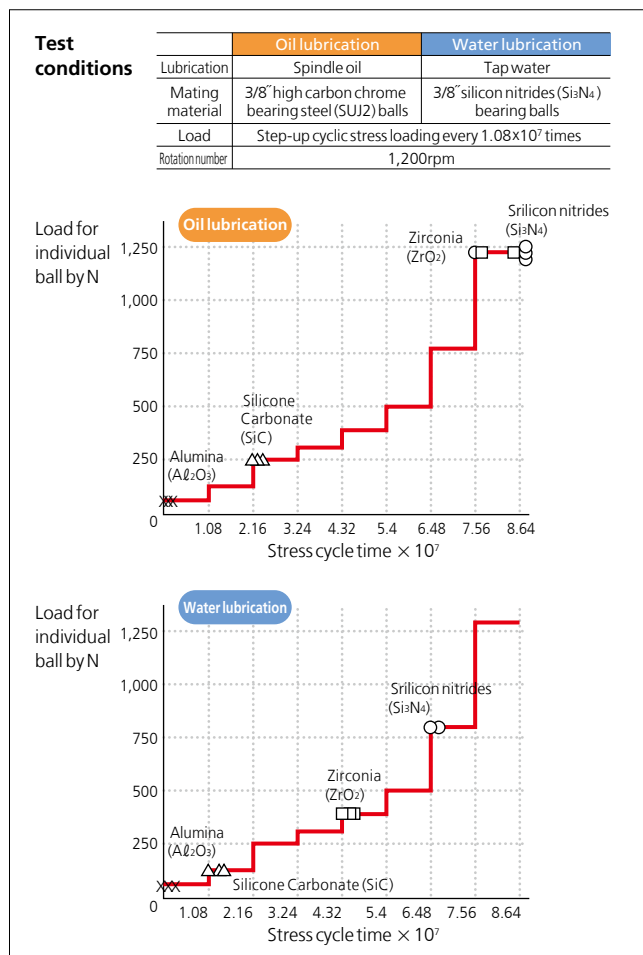

We offer light-weight, high strength and high abrasion resistant silicon nitride ( $\text{Si}_3\text{N}_4$ ) ceramics for structural parts. They are especially fit for bearing balls and applied to various lines of industrial use.

### Comparison of properties between silicon nitride ( $\text{Si}_3\text{N}_4$ ) ceramics and high carbon chrome bearing steels; and features of ceramic bearings

Item	Unit	Silicon nitrides	Bearing steels	Features of ceramic bearings
Thermal resistance	°C	800	180	Heavy-duty bearings under elevated temperature
Density	Mg/m <sup>3</sup>	3.24	7.8	Low centrifugal force to rolling balls, causing long life and low temperature rising
Coefficient of thermal expansion	× 10 <sup>-6</sup> /K	3.0	12.5	Minimum dimensional deviation in inner clearances by temperature rising, causing low vibration and small change in pressurization
Hardness	HV	1500	750	Minimum deformation in rolling contact members, causing high rigidity
Young's modulus	GPa	308	208	
Poisson's ratio		0.29	0.3	
Corrosion resistance		Good	Not good	Serviceable under chemical environments including acidic and alkaline solutions
Magnetism		Nonmagnetism	Ferromagnetic material	Minimum rotational fluctuation made by magnetization under strong magnetic field
Electric conductivity		Insulator	Conductor	No electric corrosion especially in generators and motors
Mode of bonding		Covalent bonding	Metallic bonding	Minimum adhesion of contact parts caused by oil film breaking

### Results of abrasion resistance test for silicon nitrides TSN-15

## Silicon nitride ( $\text{Si}_3\text{N}_4$ ) ceramics for automobiles

We have started joint development with Cummins Engine Company, Inc., one of the biggest diesel engine manufactures, since 1987 and have lots of successful experiences in practical application of silicon nitride fine ceramics mainly in the field of abrasion resistant parts for diesel engine fuel system. Thanks to their light weight, high abrasion resistance and excellent corrosion resistance, silicon nitride ceramics can make environmentally friendly engine parts that help complete the combustion required by world-wide exhaust gas regulations. We are very sure to offer ceramic products that have superior cost performance and are manufactured on a basis of the experiences of over twenty years both in product technology and material technology.

### Comparison of abrasion loss between metals and ceramics

## Silicon nitride ( $\text{Si}_3\text{N}_4$ ) ceramics for industrial facilities

We offer a variety of ceramics parts for industrial facilities taking advantage of their superior properties of abrasion resistance, thermal resistance, thermal shock resistance and poor wettability with molten metals. We are supplying silicon nitride center bulbs, contact collets, masks and so on to semiconductor manufacturing facilities that keenly require low dusting and long life components.
